Personal Domination Strategy: This provides for unlimited leads at a substantial cost to start the program plus a monthly website hosting fee. The web sites will have your business phone number on it and you will own the domains. The cost is \$850 for the first website for each business category for the first city and to modify the website for successive cities is \$275. Web site registration fee is \$15 per domain and \$10 a month hosting fee. Additionally there is a \$60 maintenance fee every six months per website (note this is required so that search engines will see some change in the site). This pricing, hosting and registration fee is fixed for 12 months and will be renegotiated at the end. Additionally there is a databasing option for a monthly fee of \$15 per website per account (multiple accounts are allowed for additional employees to have access to the database). Note: this option does not give exclusivity in your business category however IDS does guarantee you will be in the first page along with the other business.

Unlimited Lead Option: This plan allows for unlimited leads delivery for a minimal start up cost, currently \$99 per domain per year but is subject to change without prior notice, but has a monthly fee depending on the population size. This option does allow for your phone number to put on the web site. IDS purchases the domain and pays for the website hosting. Note: IDS will own the domains. Each website will have a feedback form for IDS to monitor the businesses credibility. The period of contract is 12 months and will be renegotiated at the end of the term. It also provides for the database option at a monthly fee. If this option is taken then the other two options are not available for that business category in the city taken.

Pay Per Lead Option: This plan allows to pay for leads as you go with a minimal start up cost of \$99 per domain for each year. However this plan does not allow for phone numbers to be put on the sites and does not guarantee exclusivity for the city and business category. This option does allow for the database option and can be converted to the other options upon request by renegotiating the contract. The contract is for a period of 12 months and the web site will also include a feedback form.
